SP LINE MACHINES

DESIGNED AND MANUFACTURED TO INTEGRATE TO CUSTOMER'S SPECIFIC INSTRUMENTATION

Olamef's knowledge and experience manufacturing forming machines are applied when designing this new line of equipment It helps to eliminate manually forming and inserting through hole components

Operate components without nicking or cracking leads.

The SP machines cut, bend and form components placing them in a position where they can be picked up by an automatic system to complete an assembly cycle.

Weight, dimension and volume of feeders vary on each individual unit and depend greatly on the customer's requirements.

Pneumatic step by step feeder for the preparation of radial taped components

SP21.03 STRIGHT CUT ADJUSTABLE HEIGHT

SP21.09 CUT AND 90° BEND

Pneumatic feeder SP21 is designed to preform taped radial components. Very fast system suitable to height adjustable cut or cut and 90° bend. It is supplied mechanically operating, complete with cylinders; without electrical or pneumatic systems and PLC. This feeder can prepare components to be picked up by a mechanical gripper. It is suitable as working point in automatic placement lines.

PRODUCTION: 1.200 P/H

AUTOMATIC BY STEP FEEDER FOR STRIGHT CUT OF RADIAL TAPED COMPONENTS

SP 21/A 03 STRIGHT CUT ADJUSTABLE HEIGHT

SP 21/A 09 CUT AND 90° BEND

SP21/A is a pneumatic machine suitable to operate radial taped components. Very fast system suitable to height adjustable cut or cut and 90° bend.

It automatically operates components for their subsequent ejection into a part bin.

PRODUCTION: 1.200 P/H

STEP BY STEP PNEUMATIC FEEDER EQUIPPED WARRENES ABLE TO OPERATE TAPED RADIAL Step by step pneumatic feeder equipped with COMPONENTS

SP27.01 cut and form with KINKS

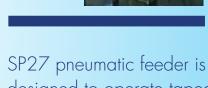

SP27.02 CUT AND PITCH SPREAD

SP27.04 CUT AND SMD OUTWARD FORM

designed to operate taped radial components. As this model have more posts, it is able to operate different and more complex forms depending on the customer's request. It is supplied mechanically operating, complete with cylinders; without electrical or pneumatic systems and PLC. This feeder can prepare components to be picked up by a mechanical gripper. It is suitable as working post in automa-

tic placement lines.

SELECTION OF SP27.06 FORMS ON DEMAND

PRODUCTION: 700 P/H

STEP BY STEP PNEUMATIC MACHINE SP27 A EQUIPPED WITH MORE POSTS ABLE TO OPERATE TAPED RADIAL

COMPONENTS

SP27/A 01 CUT AND FORM WITH KINKS

SP27/A 02 CUT AND PITCH SPREAD

SP27/A 04 CUT AND SMD OUT-WARD FORM

SELECTION OF FORMS ON DEMAND

SP22 PNEUMATIC STEP BY STEP FEEDER FOR THE PREPARATION OF TAPED AXIAL COMPONEN PREPARATION OF TAPED AXIAL COMPONENTS

SP22.05 CUT BEND AND SWAGE LEADS

SP22.08 CUT AND 90° BEND

SP22.17 CUT AND DOUBLE BEND

SP22.21 CUT AND BEND FOR VERTICAL MOUNT

SP22.25 CUT, BEND AND **FORM**

PRODUCTION: 1.200 P/H

Special pneumatic post designed on specific data received by customer for the cut, bend and form of taped axial components. Tape feed occurs on horizontal axis. Components are individually and vertically operated from top to bottom. The leads of the component are held on the right and left sides of the body during the cut. This way all risks of damaging the body are avoided. This position is supplied without electrical, electronic or pneumatic system and it is mechanically operating. Then it can be integrated to an automatic placement system.

AUTOMATIC CUTTING BENDING FORMING MACHINE FOR TAPED AXIAL COMPONENTS

48.0[0] CUT BEND AND FLATTEN LEADS

Special automatic machine designed to cut, bend and form axial components to customer's

specification and

PLC controlled. Tape feed occurs on horizontal axis. Components are ndividually

and vertically operated from top to bottom. The leads of the component are held on the right and left sides of the

body before the cut

and during the forming. This way all risks of damaging the body are avoi-

ded.

48.0L02.01 cut and "u" bend with kink inward

48.0L02.04 CUT AND "C" BEND

48.0L02.06 CUT AND "SEAGUIL WINGS" FORM

48.0L02.11 cut and only one side 90° bend

48.0102.18 cut and loop form

PRODUCTION: 1.200 P/H

AUTOMATIC, PNEUMATIC CUTTING AND FOR-MING MACHINE FOR TAPED HALL TRANSISTORS

SP26.02 CUT AND FORM

SP26.05 CUT AND 90° BEND

SP26.06 CUT AND "S" SHAPE FORM SUITABLE FOR FLAT LEAD

SP26.09 cut and "s" shape form"

PRODUCTION: 1.200 P/H

SP26 is an automatic, pneumatic machine with tape feed, centring, cut and form for taped Hall transistors. This machine was designed to operate Hall Transistors which are very delicate and weak and need perfect positioning on the forming die. The model SP26 is equipped with a pneumatic centring gripper that locks the body of the component. After cutting the component from the tape the gripper moves it to the subsequent step (i.e. 90° bending, SMD form or other forms) and finally places it into a bin or into a set point where a mechanical hand (robot) can pick it up.

Manual machines for loose compo-

NENTS DESIGNED TO CUSTOMER'S SPECIAL NEEDS

EXAMPLES OF FORMS:

SP20.05

SP20.07

SP20.08

PRODUCTION: 600 TO 1.000 P/H

SP20 line Pneumatic machines are manually operated equipment, individual component feed suitable to cut and form radial loose components. Machine's die assembly is designed to quickly reach the forms requested by the customer. It simplifies and speed up the time needed, reducing the number of steps in one single operation

AUTOMATIC CUTTING – PREFORMING MACHINE AND SUBSEQUENT TAPED FILTERS' PLACEMENT

SP34.01

SP34.01 is an automatic machine designed to cut, preform and place filters. It is an example of a manipulator that OLAMEF designed to take radial components from the tape, operate the leads at more intermediate posts and then place component where the customer needs it.

PRODUCTION: 1000 P/H

LOOSE COMPONENTS PREFORMING MACHINES

SP36.03 axial loose components forming

SP36.05 SPECIAL COMPONENTS CUTTING AND FORMING

PRODUCTION: 700 P/H

SP36 line pneumatic machines are manually fed equipment for individual loose components cutting and forming. Machine's die assembly is designed to quickly reach the forms requested by the customer. It simplifies and speed up the time needed, reducing the number of steps to one single operation.

MANUAL MACHINE FOR THE LOOSE L.E.D. PREFORMING

SP38.01 loose l.e.d. cut and left bend

SP38.02 LOOSE L.E.D. CUT AND RIGHT BEND

PRODUCTION: 700 P/H

SP38 is a pneumatic machine, controlled by a foot pedal . Components to be operated shall be manually fed and this tool cuts, bends and forms loose L.E.D. as requested by the customer

AUTOMATIC PLECEMENT MACHINE FOR TRADITIONAL THROUGHOLE COMPONENTS

SP2006.01 Axial taped

COMPONENTS CUTTING BENDING

AND FORMING MACHINE

PRODUCTION: 1200 P/H

Thanks to the experience matured with the manufacturing of hundreds special feeders for axial and radial components (SP21, SP22, SP26, SP27) Olamef designed this bench placement machine for through hole components. It is an automatic machine designed for cutting, bending and eventually forming taped axial components that will subsequently be inserted into a circuit Board by the same machine's manipulator. The machine can be supplied in different versions: It can operate as a selfstanding station with manual load and unload of the P.C.Boards; it can be located in line. In this case the components are inserted into the P. C. Board which is directly positioned on a conveyor belt or on a load/unload system and this will make the operation fully automatic. It can be realized on customer's request and beside axial and radial parts it can be designed to place also TO-220 transistors, ICs, connectors and other components in tube.
